MEET MEHTA

FULL STACK DEVELOPER | SOFTWARE DEVELOPER (SDE) | BACKEND SYSTEMS

Ahmedabad, India | +91 83209 07038 | mehtameet685@gmail.com

linkedin.com/in/meet-mehta685 | github.com/meetmehta0685 | meet-mehta.vercel.app

Summary

Computer Science and Engineering student and full-stack developer experienced in responsive web applications, APIs, database-backed workflows, and real-time integrations. Built student placement tools at Appendo and end-to-end products for interview preparation, food rescue, and encrypted clipboard sync.

Experience

Full Stack Developer Intern, Appendo Consulting and Services **May 2026 – Jul 2026**

Hono, Supabase, Prisma *Vadodara, Gujarat*

- Built a placement portal for SVIT with student dashboards, a placement-drive calendar, and analytics modules using Hono, Supabase, and Prisma.
- Translated product requirements and prototypes into responsive desktop and mobile workflows for placement management and mock interviews.
- Worked with product and engineering to refine reusable, accessible interface patterns across student-facing screens.
- Contributed product inputs on one Tyroo.ai feature, sharing feedback with the startup team during feature development.

Projects

Go Reverse Proxy

Go, net/http, Prometheus

- Built a standard-library HTTP reverse proxy with configurable upstream timeouts, connection pooling, graceful shutdown, and request-ID-based JSON logs.
- Added a process-local fixed-window rate limiter, a half-open circuit breaker, and health and Prometheus metrics endpoints; covered forwarding and failure paths with race-tested Go tests.

PrepRoom: AI Mock Interview Platform https://prepwithpeers.vercel.app/

Next.js, TypeScript, Groq, Whisper, LiveKit, Prisma, Neon, Auth.js

- Built five-question AI interviews across six tracks and three experience levels, grounding prompts in each candidate's resume and target role and adapting follow-ups to prior answers and submitted code.
- Added text, recorded-voice, and coding responses with Groq Whisper transcription, Monaco coding questions, and private LiveKit peer interview rooms.
- Generated question-by-question evaluations across five dimensions: technical depth, communication, problem solving, role fit, and resume depth, with benchmark answers, strengths, and gaps.
- Persisted sessions and reports in Neon through Prisma; restricted PDF downloads to report owners and added curated fallback questions and reports when AI services are unavailable.

Harvest Relay: Food Redistribution Platform https://food-ngo-beta.vercel.app/

Next.js, Prisma, Neon, Auth.js, MapLibre, Ably

- Built role-based donor, NGO, and volunteer flows, including map-based donation reporting, top-three nearest-NGO matching, and first-acceptance assignment.
- Separated donation and rescue-assignment lifecycles so expired volunteer offers could be reassigned while the donation remained active.
- Implemented expiring volunteer dispatch with automatic reassignment and Ably realtime updates backed by database retry delivery.
- Built a shared donor/NGO tracking view with a map and immutable timeline; confirmed pickup with OTPs, ingested volunteer GPS, and automated geofence arrival detection.

ClipSync: End-to-End Encrypted Clipboard Sync https://github.com/meetmehta0685/Clipboard-Sync

Go, WebSockets, Noise, mDNS, SQLite, Next.js, Docker

- Built a cross-device clipboard sync tool: a Go daemon syncs text, images, and files between laptops in about a second, with a Next.js PWA for phones and a self-hosted WebSocket relay.
- Encrypted clips end to end with XChaCha20-Poly1305 over authenticated headers and derived relay rooms and tokens with HKDF, so the relay stores only ciphertext; paired devices with a one-time QR code.
- Connected laptops on the same network directly over Noise IK with mDNS discovery alongside the relay, deduplicating clips across paths and ordering them with Lamport clocks so every device converges.
- Chunked large images into 256 KiB pieces with re-requests for lost chunks, resumed offline devices from relay sequence numbers, and covered sync with race-tested Go tests on simulated lossy networks.

Skills

Languages: Go, TypeScript, JavaScript, Python, C
Frontend: React, Next.js, Tailwind CSS, HTML, CSS
Backend: Node.js, Express.js, Hono, FastAPI, REST APIs, WebSockets
Data: PostgreSQL, Supabase, Neon, Prisma, MongoDB, SQLite
AI and realtime: Groq, Whisper, LiveKit, Ably
Tools: AWS, Docker, Git, GitHub, Vercel

Education

Adani University, Ahmedabad 2023 – 2027

B.Tech, Computer Science and Engineering (AI & ML) CGPA: **7.48/10**

Certifications

AWS Academy credentials: Cloud Architecting (Apr 2026) | Cloud Foundations (Nov 2025) | Machine Learning Foundations (Nov 2025)
